

[e1] The idea of the bachelor degree is to put together a cumulative grade from various individual assignments

[e2] in order to generate a final grade.

[e3] This is also more akin to the real working world later,

[e4] where performance isn't singular, but constant

[e5] and has to be delivered over longer periods.

[e6] That's why it makes sense that the bachelor thesis only makes up a relatively small portion of the final grade (15 out of 120 credits).

[e7] However, the effort required for the individual equally weighted modules differs strongly.

[e8] It would therefore be wise to adjust the required effort for final theses accordingly.
